## **List of Tables**

1.	Hispanic or Latino Origin by Race for Total Population by County of Residence: 2000 & 2007.....	5
1A.	Hispanic or Latino Origin by Race for Total Population by County of Residence: 2006 & 2007.....	6
2.	Households by Vehicle Availability by County of Residence: 1960-2007 .....	7
3.	Household Vehicles Available by County of Residence: 1960-2007.....	11
4.	Population by Ratio of Income to Poverty Level, by County of Residence: 2000 & 2007 .....	15
4A.	Population by Ratio of Income to Poverty Level, by County of Residence: 2006 & 2007 .....	16
5.	Housing Cost Burdened Households (>30% of Income on HH Costs), by County of Residence: 2000 & 2006-2007 .....	17
6.	Housing Cost Burdened Households (>30% of Income on Housing Costs): 1990, 2000-2007.....	18
7.	Means of Transportation to Work by County of Residence and County of Work: 2007 .....	19
8.	Means of Transportation to Work by County of Residence: 2000 & 2007 .....	20
8A.	Means of Transportation to Work by County of Residence: 2006 & 2007 .....	21
9.	Means of Transportation to Work by County of Work: 2000 & 2007 .....	22
9A.	Means of Transportation to Work by County of Work: 2006 & 2007 .....	23
10.	Mean Travel Time to Work by Means of Transportation by County of Residence: 2000 & 2006-2007.....	24
11.	Mean Travel Time to Work by Means of Transportation by County of Work: 2000 & 2006-2007.....	25
12.	Travel Time to Work by County of Residence: 2000-2007.....	26
12A.	Travel Time to Work by County of Residence: 2006-2007.....	27
13.	Travel Time to Work by County of Work: 2000-2007.....	28
13A.	Travel Time to Work by County of Work: 2006-2007.....	29
14.	Intra-County and Inter-County Workers by County of Residence: 2000 & 2006-2007 .....	30

## **I. INTRODUCTION**

This Data Highlights Report provides selected tabular summaries of data from the American Community Survey (ACS) 2007. The focus of this summary is comparison of ACS 2007 data with those from ACS 2006 and Census 2000, all data sources produced by the U.S. Census Bureau.

ACS 2007 data already released includes:

- § Income, Earnings and Poverty data for areas with populations of 65,000 or more – released **August 26, 2008**
- § Social, Economic, Housing, and Demographic data for areas with populations of 65,000 or more – released **September 23, 2008**

ACS 2007 data pending later release:

- § Social, Economic, Housing, and Demographic data for areas with populations of 20,000 or more – scheduled for release **December 9, 2008**

The release scheduled for December 9, 2008 will be a 3-year product, compiling data from 2005-2007 (called a “period estimate”), and summarized for geographies with populations of 20,000 or more. Due to the smaller sample size of the ACS (relative to the Census 2000 “long form”), it is necessary to accumulate 3 years worth of samples for 20,000+-population geographies to maintain estimate integrity. Similarly, data published for geographies smaller than 20,000 population, including census tracts, will require 5 years worth of accumulated samples. The first 5-year data release will comprise years 2005-2009, and will likely be available in late 2010.

The geographic focus for this report is the nine-county San Francisco Bay Area, including the counties of Alameda, Contra Costa, Marin, Napa, San Francisco, San Mateo, Santa Clara, Solano and Sonoma. Data in this summary is reported at the regional and county level. In some instances, California and national data are included for comparison purposes. The 20 tables provided here will be supplemented by more extensive analysis in the coming months, particularly when additional data is released in December.

### **A. Background for the American Community Survey**

The Census Bureau has replaced the decennial 1-in-6 “long form” questionnaire with the yearly American Community Survey (ACS). Just like the long form, the ACS provides estimates of household and person characteristics, such as population, household income, employment, disability, and other topics. Unlike the decennial long form, however, the ACS provides data annually.

The yearly ACS will eliminate the need for a decennial long form in the 2010 census. Advantages of the yearly ACS over the long form include more timely information, with annual updates of sampled data. Increased sampling options and flexibility in design and content, a better trained full-time enumerator staff (as opposed to temporary staff hired once every 10 years), and faster data release are also improvements. Disadvantages of

the ACS include a smaller sample set than the long form and potentially less-accurate results due to larger sampling error.

The ACS has been in development since the mid 1990s, and began collecting its first pilot samples in 1996 in four test sites. ACS 2006 represents the first year of full ACS implementation, including sampling of residents in group quarters.

A listing of the Bay Area geographies with ACS 2007 data is provided on the next page.

For more information on this data summary or other American Community Survey or Census 2000 issues, please contact the MTC census analysis staff: Mr. Chuck Purvis, at 510-817-5755 (e-mail: [cpurvis@mtc.ca.gov](mailto:cpurvis@mtc.ca.gov)), or Mr. Shimon Israel, at 510-817-5839 (e-mail: [sisrael@mtc.ca.gov](mailto:sisrael@mtc.ca.gov)).

## **Bay Area Geographical Areas with American Community Survey 2007 Data**

### **Counties (9)**

Alameda  
Contra Costa  
Marin  
Napa  
San Francisco  
San Mateo  
Santa Clara  
Solano  
Sonoma

### **Places (26)**

Alameda  
Antioch  
Berkeley  
Concord  
Daly City  
Fairfield  
Fremont  
Hayward  
Livermore  
Milpitas  
Mountain View  
Napa  
Oakland  
Pleasanton  
Redwood City  
Richmond  
San Francisco  
San Jose  
San Leandro  
San Mateo  
Santa Clara  
Santa Rosa  
Sunnyvale  
Union City  
Vacaville  
Vallejo

### **Urbanized Areas (10)**

Antioch  
Concord  
Fairfield  
Gilroy--Morgan Hill  
Livermore  
Napa  
San Jose  
Santa Rosa  
Vacaville  
Vallejo

### **Combined Statistical Area (1)**

San Jose-San Francisco-Oakland  
[11-county region including Santa Cruz  
and San Benito Counties]

### **Metropolitan Statistical Areas (5)**

Napa  
San Francisco-Oakland-Fremont  
San Jose-Sunnyvale-Santa Clara  
Santa Rosa-Petaluma  
Vallejo-Fairfield

### **Public Use Microdata Areas (54)**

All 54 Public Use Microdata Areas  
(5% PUMAs of 100,000+ population)

## **II. RESULTS HIGHLIGHTS**

This section provides important highlights found in comparing ACS 2007 data with those from earlier census years. Report highlights include:

- ✓ All Bay Area counties except San Francisco show a decline in the share of white alone residents between years 2000 and 2007. Similarly, every county but San Francisco has an increase in the share of Hispanic or Latino residents during the same period (Tables 1 and 1A).
- ✓ Rates of household vehicle availability have stabilized in recent years. A full roster of household vehicle availability, years 1960-2007, is available by county and region in Tables 2 and 3.
- ✓ The share of Bay Area population under the 100-percent and 200-percent poverty thresholds increased between years 2000-2007, and decreased between years 2006-2007. The poverty reduction, 2006-2007, was statistically significant for the 100-percent threshold population, but not for the 200-percent threshold population (Tables 4 and 4A).
- ✓ The share of Bay Area households spending more than 30 percent of household income on housing (“burdened households”) remained stable between years 2006-2007 at approximately 45 percent. The Bay Area is relatively less housing cost burdened than California as a whole (45 to 47 percent, respectively), though more burdened than the United States as a whole (45 to 35 percent, respectively) (Tables 5 and 6).
- ✓ Between years 2006-2007, the share of commuters driving alone and carpooling to work decreased slightly, while increases were counted in transit, bicycle, and walk commute modes. The increase in total Bay Area transit commuters (315,000 to 336,000) is statistically significant. The increase in regional share of transit commuters (9.5 to 10.0 percent), however, is not statistically significant (Table 8A).
- ✓ The total number of transit commuters residing in San Francisco County increased between years 2006 and 2007, from 120,000 to 137,000. During the same period, the share of San Francisco transit commuters increased from 30.3 to 33.0 percent. Both the total and share increases are statistically significant (Table 8A).
- ✓ The mean Bay Area travel time to work for all modes is relatively stable, years 2006-2007, at about 27 minutes (Table 10).
- ✓ The share of Bay Area commuters living and working in the same county remained stable between 2000-2007 (72 percent) (Table 14).

Notes: Tabulation prepared by MTC Staff based on data from Census 2000 Summary File 3 (Table P88), and the American Community Survey 2007 (Table B17002).

Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups are considered neither "poor" nor "non-poor", and were excluded from the numerator and denominator when calculating poverty rates. Thus, the total population in poverty tables - the poverty universe - is slightly smaller than the overall population.

Notes: Tabulation prepared by MTC Staff based on data from the American Community Survey 2006-2007 (Table B17002).

Poverty status was determined for all people except institutionalized people, people in military group quarters, people in college dormitories, and unrelated individuals under 15 years old. These groups are considered neither "poor" nor "non-poor", and were excluded from the numerator and denominator when calculating poverty rates. Thus, the total population in poverty tables - the poverty universe - is slightly smaller than the overall population.

Notes: Tabulation prepared by MTC Staff based on data from Census 2000 Summary File 3 (Tables H69 and H94), and the American Community Survey 2006-2007 (Tables B25070 and B25091).

Housing unit universes differ between years. For 2000, the universe includes only "specified" renter- and owner-occupied housing units, while the 2006-2007 universe includes the full renter- and owner-occupied universe. "Specified renter" housing units exclude single-family houses on 10 acres or more. "Specified owner" housing units include only single-family houses on less than 10 acres without a business or medical office on the property. The data for "specified units" exclude mobile homes, houses with a business or medical office, houses on 10 or more acres, and owned housing units in multiunit buildings.

The difference between "specified units" in Census 2000 (2,251,032 in the Bay Area) and "total households" in Census 2000 (2,466,019) is 214,987 households.

**Table 6: Housing Cost Burdened Households (>30% of Income on Housing Costs): 1990, 2000-2007**  
**San Francisco Bay Area, California, and United States**  
**1990-2000 Censuses, Census 2000-2001 Supplemental Surveys and the American Community Survey 2002-2007**

Prepared by MTC Staff based on the 1990 Summary Tape File 3 (Tables H051 and H058), Census 2000 Summary File 3 (Tables H69 and H94), Census 2000-2007 Supplementary Surveys/American Community Survey 2002-2003 (Tables H067 and H088), and the American Community Survey 2004-2007 (Tables B25070 and B25091).

\*Housing unit universes differ between years. For tabulated data 1990-2003, the universe includes only "specified" renter- and owner-occupied housing units, while 2004-2007 include the full renter- and owner-occupied universe.

"Specified owner" housing units include only single-family houses on less than 10 acres without a business or medical office on the property. The data for "specified units" exclude mobile homes, houses with a business or medical office, houses on 10 or more acres, and owned housing units in multifamily buildings.
